

## **Octa Réserve de Marche**

The first Octa model, displays two-figure date, the 120 hours of power reserve indicator, the hours, minutes and small seconds on F.P.Journe's trademark regulator dial.

The robust, multi-purpose Octa is F.P.Journe's most highly evolved construction. With different complicated mechanisms built into movement, the Octa five-day automatics always measure 30 mm x 5.5 mm. It's rare to find a watchmaker with a spatial vision to imagine a single complex chassis that integrates very different mechanisms without changing its size. It is also the first automatic movement with a power reserve that maintains precision timekeeping for five days (120 hours) off the wrist.
